Priority Number: 1992-06-10 JP1992000150295

Abstract: PURPOSE: To enable direct communication with a normal address while using an abnormal address by providing a router and registering the abnormal address and the normal address on an address translation table while pairing those addresses.

CONSTITUTION: At the router 1, an address translation table 21 and an address analyzing mechanism 3 are provided; networks are connected through the router 1, and the router 1 receives a packet transmitted from a certain network to the other network. The address extracted from the packet is translated by the address analyzing mechanism 3 while referring to the address translation table 21 and transmitted to the destination side network.
